

Tru Count, Inc. Air Clutch Ordering Instructions

These instructions are to ensure that you are ordering everything you need so that your Air Clutch kit works properly. After receiving your order, we will fax or email you a confirmation along with your order details. You must bring any order discrepancies to our attention immediately.

RESTOCKING CHARGES

Please note: Because all Air Clutch kits are built when you place your order, we must charge a 20% restocking fee for all returned kits and parts. Therefore, it is important that you place your order correctly to avoid restocking charges.

REQUESTED SHIP DATE You can request a ship date up to December 1 of this year, as long as the date complies with current lead times. Be sure to check www.trucount.com/lead_times.htm for current lead times when selecting your requested ship date.

PLANTER MAKE Air Clutches fit on KINZE, Deere, White, and Case IH (except Cyclo) planters. Other planters may be fitted on a special order basis--please do not use this Order Form for special orders. Call 800-323-5026.

PLANTER MODEL All planters have a model number or name, such as Case IH 1250 or White 8222. We need your model number to make sure we ship all the proper hardware.

NUMBER OF ROWS You will need one Air Clutch per row, regardless of how many sections you want.

NUMBER OF SECTIONS YOU WANT Air Clutches can be banked together into as many sections as you want, all the way to single row sections. You determine your sections by banking clutches into valves. We sell valves in a Valve Module box which comes with 4 valves. In other words, one Valve Module box will control 4 sections. Example: if you wish to split your planter into 8 sections, you will need to purchase 2 of the Valve Module boxes.

CHAIN DRIVE OR CABLE DRIVE We need to know which type of drive your planter has because the clutch style is completely different. Pictures can be found at www.trucount.com/air_clutches.htm.

DEERE CABLE DRIVE ONLY The section to be completed for Deere Cable Drive (Pro Drive) Planters is to let us know whether the planter has CCS (Central Commodity System) or not. We also need to know the year of the planter. We cannot know what type of clutches and hardware to send you without this information. Pictures can be found at http://www.trucount.com/cable_drive_clutches.htm.

KINZE PLANTERS ONLY The section to be completed for KINZE Planters is to let us know the number of regular rows (pullers) and pusher rows. This must be completed for all KINZE orders.

ACCESSORIES You will need to let us know what accessories you want with your kit. PLEASE NOTE: ALL KITS REQUIRE AN AIR COMPRESSOR/GAGE/HOSE/TANK ASSEMBLY AND VALVE MODULE. If you choose to use another type of valve, air compressor, or air tank (not sold by Tru Count) all warranties on the Air Clutch system will automatically be void.

- EXTRA 1 GALLON AIR TANK--Recommended for planters 24 rows and up
- EXTRA AIR COMPRESSOR--Spare part purchase only
- HEAVY DUTY AIR COMPRESSOR W/ 1 GALLON AIR TANK--Only needed if you are using the air compressor to run additional air-operated devices like sprayer valves.
- CONTROL BOXES--You will need a manual control box if you are not going to run your Air Clutches using Ag Leader, Trimble, or Rinex GPS units. You will need 1 switch per section.
- 15' WIRE HARNESS EXTENSION--All Valve Module boxes come with a 50' wire harness. If you need more length, You can buy harnesses in 15' lengths.
- EXTRA HOSE--All kits are shipped with plenty of air hose if you follow the installation instructions. If you need more hose you can purchase 100' lengths.
- EXTRA TEES OR UNIONS--You can order extra tees and unions for spare parts.
- INVERTER FOR TRIMBLE OR RINEX--If you are running a Trimble or Rinex GPS unit, you will need this to control your clutches. An inverter is not required for Ag Leader Seed Command.

Air Clutch Order Form-KINZE
